

Session 2: Continue Working on the Map Application

- Review of homework: have some students stand up and tell everyone what they would like to show a tour of in their city (restaurants, parks, stores, natural features, monuments, famous places, etc.)
- Enter the URL you saved last time into a web browser. You should be taken into your ArcGIS Map Tour Builder. Please raise your hand if you cannot get there
- Time to add another tour point
 - Click add, go to location tab
 - Go to a separate browser tab and look up one example of the thing you wanted to make a tour of in your city:
 - For example: my city is San Jose and I want to make a tour of restaurants, so I would perform a Google search for “Restaurants in San Jose”
 - I then find the restaurant I like best and get its name. I go back to the Map Tour builder and enter the restaurant name in the field in the bottom left
 - You (student) do the same for whatever place you want to map
 - Raise hand if you have trouble
 - Add a description of your place/item in the information tab
 - Finally find a picture of your place/item on Google Images, just like we did in the previous session, and copy in the URL just like we did in the previous session
 - Click on “Add tour point”
 - Your tour point is live!
- Click save in the top center
- Then, click “Share” right next to save
 - You should see a big URL pop up: copy this and paste it into a new browser tab. You should see your actual story map application!
- Give the students the rest of the time to continue doing this: adding new tour points of restaurants/things they are interested in in their city

- **Make sure they save after adding every tour point**
- **They can see their updates live in the “Share” URL**
- Raise hands if any questions/problems
- When the session is over, they can simply exit the app
